NURSING EHR UPDATE

Adult ED & FSED IV Vancomycin Update- Go Live 12/13/2022

To better improve administration of the full dose, the medication order for Vancomycin Doses greater than 1500mg was updated. The medication will be profiled simultaneously and will display as two entries within eMAR, scheduled a few minutes apart. This will allow the Nurse to scan each entry and to program the pump to infuse concurrently as per administration instructions found within the label comments.

Vancomycin infusing via Concurrent Mode:

NOTE: Utilize Smart Pump Programming as applicable for your facility To *Manually* Program:

- Turn on IV Pump and select the appropriate CCA (ER Adults)
- In eMAR:
 - Scan the **patient**
 - Scan bag #1
 - Select the appropriate medication in the Drug Library
 - Program bag on channel A per Label Comments
 - Press the **Start** button and **confirm** to start infusion
 - Scan bag #2
 - Select the appropriate medication in the Drug Library
 - Program bag on channel B per Label Comments
 - When programming on channel B, the *Mode* will display as "Piggyback"
 - Press the Change Mode option, it will now display "Concurrent"
 - Press the Start button and confirm to start infusion
