HCA Healthcare®

OUTCOMES

Documenter hands the iPad to the provider for review.
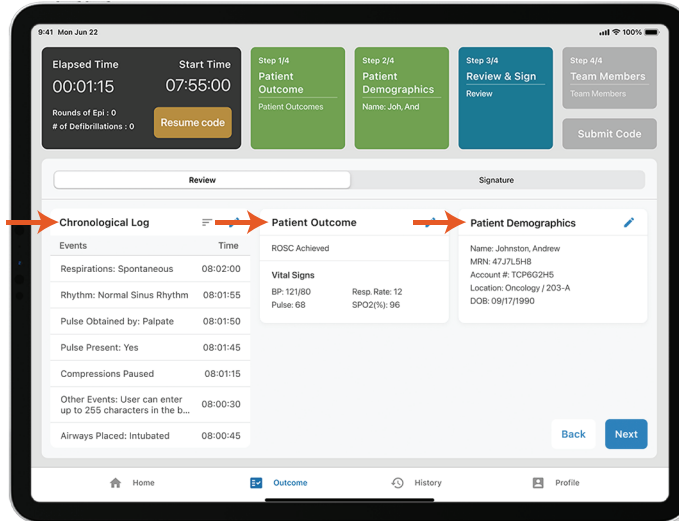

Provider reviews the content for accuracy and then electronically signs

Documenter finishes adding team members.

SUBMIT

Documenter submits the code and information will flow into Meditech.

Provider Assistance - Code Blue Documentation

Revive is an intuitive, hand-held solution for nurses [documenters] to electronically record a code blue event in real-time. Users need to obtain the iPad from the crash cart, tap the screen or home screen, and select Start Code to begin.

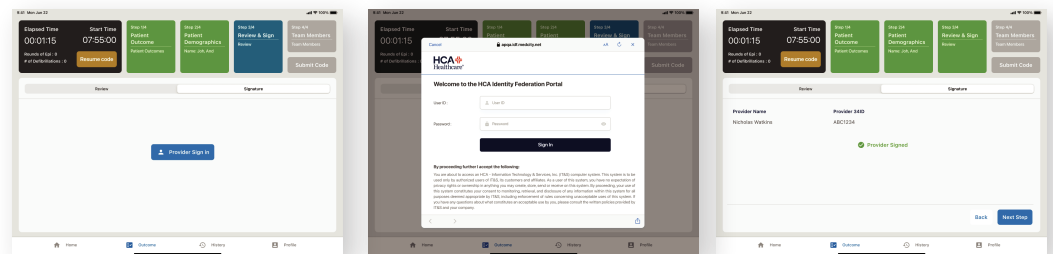

The documenter will use the Revive application, to document the code. After the code ends, they will hand the iPad to you, the provider, to review and sign. You must review the following for accuracy before signing:

- Chronological Log
- Patient Outcomes
- Patient Demographics

Note: Any additional procedures that are not designed to be captured within the application, will still need provider documentation to occur per the usual process for that procedure (examples: dictation, Meditech, paper).

Review and Sign - *(Before you leave the room)*

Verify the content above and select next to proceed to the signature page.

Sign in with your 3/4 and password. This will be your electronic signature.

You can now tap the next step button and hand the iPad back to the documenter.

Note: This application will be hosted on HCA managed iPad devices, located on the crash carts.
